

SWARDMAN

WHEELS FOR TALL GRASS

INSTALLATION MANUAL

for cylinder mowers

This manual is original.

Wheels for tall grass

The set of wheels for tall grass is designed for the occasional mowing of an overgrown lawn; for example, after returning from vacation. Unlike a roller, wheels do not completely break long blades of grass. This improves the effectiveness of mowing tall grass.

The wheels may be used in conjunction with a verticutter or scarifier cartridge.

Swardman does not recommend using the wheels over the long term because this will wear out the mowing blades.

Information – Package contents

1. 2 sets of wheels
2. Manual

Safety instructions

1. Use personal protective equipment
2. Install the wheels while the mower is on a solid surface, not on the lawn
3. Dispose of used packaging in an environmentally friendly manner

Installation manual

1. Remove the front cylinder of the mower (size 10 wrench + pliers to hold the axle)
2. The wheels are to be installed on the inside of the front cylinder console
3. Insert the screw into the hole/slot and ensure that there is a washer on both sides
4. Tighten the screws carefully using a size 5 hex key wrench
